EDUCATION

Course	College / University	Year	CGPA/%
B.Tech (MAC)	Netaji Subhas University of Technology	2023–27	6.92
CBSE Board (Class XII)	Khaitan Public School	2023	75
CBSE Board (Class X)	Khaitan Public School	2021	94

EXPERIENCE

- **Research Intern | Netaji Subhas University of Technology (NSUT), Delhi** June 2025 – Present
 - Designed a cyber-physical hydroponics monitoring system integrating deep learning with quantum computing (Qiskit) for continuous plant health forecasting.
 - Benchmarked quantum optimization approaches against classical hydroponic models using Python, PyTorch, Qiskit, GRU, VQE, SPSA, and Simulated Annealing.

PROJECTS

- **Vendor Sales Performance Analysis** [GitHub](#)
 - Consolidated four disconnected procurement and sales datasets into a unified analytical model using SQL (30+ queries with CTEs, window functions, ranking functions, joins, and subqueries) and Python, uncovering \$4.35M in loss-making sales and \$282K in dead stock.
 - Applied hypothesis testing, correlation analysis, and confidence intervals to evaluate vendor and brand performance, identifying growth opportunities across 520 brands to support procurement optimization.
- **Tableau Sales Performance Dashboard** [GitHub](#)
 - Built an interactive Tableau KPI dashboard consolidating sales trends, regional performance, and profitability metrics into a single executive reporting view.
 - Implemented dynamic filters and drill-down analysis, enabling stakeholders to navigate from executive KPIs to transaction-level insights for faster business decision-making.
- **Retail Sales Analytics Dashboard using SQL Server** [GitHub](#)
 - Authored 10+ optimized SQL queries across six business use cases using CTEs, window functions, subqueries, joins, CASE expressions, and ranking functions to generate analytical reports and business KPIs.
 - Performed revenue and customer behavior analysis to identify sales trends and top-performing products, transforming raw transactional data into actionable business intelligence insights.
- **Blinkit Trust+ | Product Management Case Study & Interactive Prototype** [GitHub](#) | [Live Demo](#)
 - Designed a trust framework after analyzing 30+ user pain points and benchmarking Blinkit, Zepto, and Instamart.
 - Designed and prototyped a transparency-first checkout featuring Trust Score, Price Lock, and Smart Fee Explanations to improve user trust, checkout conversion, and long-term retention.

ACADEMIC ACHIEVEMENTS AND AWARDS

- **HackTU 6.0, Thapar Institute of Engineering & Technology** – Finalist [Under Water Heroes](#) | [Live Demo](#)
- Leveraged an **NVIDIA DGX A100 GPU** to train a PyTorch deepfake detection model on terabyte-scale datasets, identifying compressed AI-upscaled “ShallowReals.” [Resilient Deep](#)
- Achieved **NPTEL Elite Certifications** in Programming in Java (91/100) and Psychology of Learning (97/100), demonstrating strong programming fundamentals and analytical ability.
- Solved **250+ LeetCode DSA Problems** covering Arrays, Dynamic Programming, Greedy Algorithms, Linked Lists, SQL, and Binary Search. [LeetCode](#)

POSITIONS OF RESPONSIBILITY

- **Logistics Head | Student Council – Extension and Field Outreach, NSUT** 2025 – Present
 - Coordinated logistics for **6+ university events**, managing volunteer operations, venue setup, scheduling, and stakeholder communication.

TECHNICAL SKILLS

- **Languages:** SQL, Python
- **Data Analysis:** Statistical Analysis, Machine Learning, Exploratory Data Analysis, Data Visualization
- **Libraries:** Pandas, NumPy
- **Tools:** SSMS, Tableau, Git, GitHub, Jupyter Notebook, Canva
- **Core Skills:** Business Analytics, KPI Monitoring, Reporting, Product Analytics, Business Case Analysis, Profitability Analysis, Problem Solving
